

ePrescribing Tips

Ask Your EHR Vendor ...

- *If you are fully electronically enabled. If a pharmacy believes you are able to receive electronic communications they will attempt to contact you in this manner and reduce calls to your practice.*
- *To review the electronic communication function and schedule a refresher training in the eRx module to identify short cuts and reduce clicks.*
- *About eRx Cancel, an emerging feature which allows for the electronic cancellation of prescriptions.*

It is the responsibility of the practice to ensure the formulary and pharmacy directory is updated.

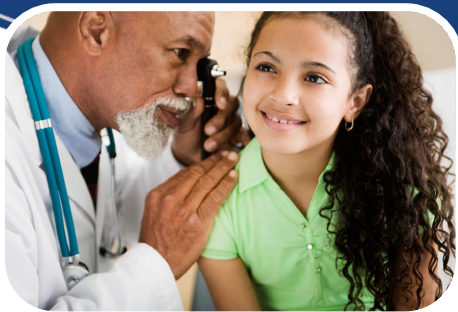

Inform Your Patients

- *Prescriptions that require a pre-authorization (ex. Controlled substances) will usually incur additional wait time until approval has been received, please notify patients at the point of care.*
- *Verify the name and location of the patient's preferred pharmacy. Prescribing to the incorrect pharmacy can lead to reduced medication compliance.*

Stay Informed

- *Request update notifications from your EHR vendor to ensure the latest functionality.*
- *Many EHR's offer training opportunities via their website - take advantage of any training to improve your efficiency.*
